Cobs and heavier breeds

### LARGE

16.2 hh and over ( over 9.5" 240mm bone )  
Large Thoroughbreds, Large Warm bloods, Hunters, and horses with heavy bone

## FITTING INSTRUCTIONS

1. Check there is no mud or sweat on the lags
2. Ensure there is no debris on the lining of the boots that could cause discomfort
3. Fold boots around leg and fasten. The fit should be firm, but not too tight  
(With 3 and 4 strap boots it is easiest to fit the middle straps first)
4. After fastening all straps, reposition each strap in turn to ensure even and smooth tension
5. If necessary cut straps to desired length with sharp scissors
6. KEEP BOOT STRAPS FASTENED AFTER USE AND WHEN WASHING, TO AVOID TANGLES AND CLOGGING

## IMPORTANT WASHING AND CARE INFORMATION

**WASHING:** Wash boots regularly, either by hand, or machine at 30°C.

NEW Boots are made to withstand repeated washing. We recommend using mild washing powders or soap flakes. Sio detergents should not be used, as they may damage the product or cause skin irritation. NEW boots are quick drying and should never tumble dried or placed over a radiator or stove.

**CARE:** The lining surface next to the skin should be kept clean and free from grit particles or stable floor debris. Always inspect the linings and run hands over the surface to check the boots are clean before fitting. If the 'hook' fastening should become clogged with debris, brush gently with a New Equine Wear 'VelCleaner' brush to restore adhesion.

**CAUTION:** Synthetic materials in this product can be damaged in temperatures above 150°F (65°). Do not store in confined spaces exposed to direct summer sun.
