

## VEREDUS MAGNETIK RANGE

Magnetotherapy is a medical method for curing certain pathologies in man and in animals, by exploiting magnetic fields. The creation of a magnetic field, by means of permanently magnetized multi-pole NEODYMIUM plates, helps restore biological energy by slowing down the physiological degeneration of tissues. Magnetic therapy stimulates vasodilation, speeds up the elimination of dead cells and toxins, while decontracting the muscles and reducing swelling. Static magnetic energy also stimulates the production of ELASTIN and COLLAGEN, which are essential elements for rebuilding tissues.

- Reduces pain and swelling
- Stimulates the flow of blood
- Speeds up the elimination of toxins
- Speeds up the regenerative processes
- Prepares muscles and tendons to the effort
